Major Morfett and Jack Roberts Coming

Recruiting Oct. 15 and 16

Pte. Arthur Roberts spent a day in town this week and to the CALL stated that his brother, Jack Roberts, would be in Gleichen on Friday, October 15th, and would be pleased to meet all the boys of this district who would like to enlist with the 82nd of which he is now a member. The following day Major Morfett will be here for recruits and no doubt Jack can assist the boys by giving them advice and in many other ways. The men who enlist here on the 16th will have the advantage of remaining together throughout the campaign.

Majorville News

(Our own correspondent)

Victor Bertrand is to be the new teacher.

J. Mowat of the 63rd regiment, who has been stopping with Thos. Sutherland, constable, for the last few weeks, returned to the Sarge on Thursday. The ladies are consequently sorry.

Grain hauling is the order of the day for those who have been fortunate enough to get threshed. The Cluny trail seems to be the most preferable.

The improvement on the roads in the vicinity is noticeable and reflects credit alike on the workmanship of those who did the work and the Government and its representative for this district who caused the work to be done. It is unnecessary to say it is duly appreciated.

Harry Baker from Vergas, Minn., a former resident, is here at present looking after his farming interests in this place.

The crying need of the day for this district is to get nearer railway accommodations, and, of course, when we cannot all move to the railway, we must have the railway come to us. The most likely realization of this being accomplished is by the "Jim Hill" road. The survey party who passed through Majorville en route from Michael, B.C., to the Hudson Bay ports, gave out some pleasing information. A siding for Majorville is all that can be expected at the present, but by and by, when circumstances warrant it, a new town will be started, which promises to eclipse all previous records.

Cultivated Strawberries Successfully

Prospects Brighter Than Ever

I have at last proved—at least to my own satisfaction—that tame strawberries can be successfully grown in Queenstown for domestic use, and, no doubt, also in a small way commercially if we were closer to a railway.

But, when farmers can raise 40 bushels of wheat to the acre and sell it at \$1.50 per bushel who would be trouble raising strawberries?

Still if every farmer can be sure to grow enough strawberries for his family, I think a good deal has been gained in a country where a few years ago we were told nothing would grow excepting wheat and oats.

Of all the small fruits strawberries are the finest in my humble opinion. A dish of strawberries with cream is fit for a king.

It is all very well, as some people tell us, that a man can sell the wheat from an acre or two and buy fruit with the money. But, very often after the wheat is sold the money is all gone, and besides there are very few who have wheat to sell in the strawberry season. And, again no strawberries are so delicious those you pick from your own garden.

It has taken me about seven years to feel satisfied that tame strawberries can be grown successfully here and I have had a good deal of disappointment. The first few years after settling here I sent for plants every spring to both eastern and western nurseries. Most of the plants were more or less dried out when received and would either not grow at all or appear to grow a while and then dry up and disappear. One year about 25 plants grew during the summer, and then I killed them with kindness during the winter by putting too much manure on them. But four years ago I saved just one plant that grew in a sheltered spot near a sod wall around the garden. I handled this plant with great care and kept hoeing dirt around the runners. From this one lonely plant I succeeded in getting about two dozen runners, which were transplanted the following spring inside my shelter belt. These all grew and set out other runners until this year I had a patch of two rows 12 rods long, bearing enough fine berries to eat every few days during the season. I have not sufficient yet for preserving but hope to have in a year or two as my plants are large and vigorous, about the size of potato tops and with enough runners to plant a large piece next year. From now on I can put out new beds each year and consider the strawberry question solved.

Am aware I am not the only farmer in this district to raise strawberries. Wm. Smith, Mrs. McCabe and Mrs. Monroe had good patches last summer and no doubt others. But it is also known that some have failed and that others would like to try but fear it will prove a failure, and to these later I will offer a few suggestions taught me by experience.

The best assurance of getting strawberries is to have a shelter-belt, if not a board fence will do, as the plants need protection. You will hardly ever find wild strawberries growing on the open level prairie, but always in some coulee or sheltered spot. The "Senator Danlop" is one of the best kinds for this country. Order about 100 plants next spring from the nearest nursery. If the plants are dry

JOHN GLAMBECK.

Coming Events

Oct. 1—Annual meeting of Red Cross Society.

Oct. 15—The Musical Eckhardts in Opera House.

Oct. 26—John Glambeck's auction sale at Queenstown.

Nov. 23 to 25—Western Canada Irrigation convention at Bassano.

Dec. 14 to 17—Calgary Winter Fair.

Every Monday—Oddfellows.

Every Thursday—K. of P.

Monday—Ad. changes required by noon at CALL office.

The Queenstown Items

The greatest crop ever raised in Queenstown has at last been cut and stacked. Most of it was harvested before the frost came but a few fields were caught, yet the grain was probably so far advanced that little damage was done. Threshing has started but very little progress has yet been made as the weather has been unfavorable, the grain tough and the straw, very heavy. Without doubt it will be a long time before some of us complete our threshing. However, as the price of wheat keeps going down it is of no use rushing our grain on the market. Of course, some of those we owe may think otherwise.

Harry Dietz is one of the greatest grain growers in the district this year, having nearly 700 acres in crop and all very heavy.

Frank Pabst has returned from Washington to look after the threshing of the grain on his homestead.

Well, Fred, how about that wedding dance? The boys are waiting.

J. J. Ansard, our local storekeeper, says business is unusually good of late. Often he is called out of bed in the night to serve customers. He has about half a dozen threshing outfits to supply with the necessities of life.

In case very many farmers succeed in getting threshed before the freeze up there will be something doing around the old ferry. I see a picture of all the way from 50 to 100 four-horse teams waiting their turn to pass that antiquated means of conveyance that might be all right in some new settlement along the McKenzie river, but should have been thrown on the scrap heap so far as Queenstown is concerned years ago. It is ridiculous that the farmers in one of Alberta's best grain districts should be compelled to put up with this ferry nonsense year after year just because the government is too niggardly to build a bridge.

Great and glorious reports are coming in about big yields from the little threshing that has been done. It is said that 48 bushels of wheat to the acre is the smallest. A. Begg's marquis wheat on summer fallow went 56 bushels, and one man claims 65 bushels but this is probably stretching it some, and it is said he will have the 18 acres surveyed to make sure.

STRAYED—from ranch of Casper Bartsch, one dark bay gelding, foretop clipped, white spot on head, pig-eon-toed, branded **H** blotted \$10 reward for delivery to above or information as to whereabouts.

Jack Matthews. 20ft.

TAKEN UP—by N. J. Robinson, Sec. 24-21-25. Sorrel roan mare, branded **H** (joined) on left hip, 4 white feet, white strip in face, weight about 700 lbs., aged.

Mike Brown, Brand Reader.

FOR SALE—International gasoline engine three horse power; pump, 500 feet of 1½ pipe, 10 barrel galvanized tank suitable for cistern. All very cheap if taken at once. Apply Roy M. Allen.

Buf

Rev Stanley Stocken left Tuesday afternoon for Calgary after visiting his brother a short time, this being his first visit here since March. He looks much better as a result of his trip to the Coast. We regret to learn Mrs. Stocken is again quite seriously ill and will have to undergo another surgical operation.

HUGE INVESTMENTS OF AMERICAN CAPITAL

"Monetary Times" Annual Compilation Shows Over \$600,000,000 in the Aggregate

Interesting figures dealing with investments of American capital in Canadian enterprises are given by the "Monetary Times" in their annual review.

Dealing with the investments in industrial enterprises it appears that the largest number of branch manufacturing plants of United States companies is located in Ontario, although there is a tendency to choose Western Canadian locations to a greater extent. At least twelve United States manufacturers of agricultural and farm implements have branches in the Dominion and about as many makers of automobiles. In the latter case, the parts are usually imported separately and assembled in this country. Several United States manufacturers of chemicals, drugs, patent foods and cereals have factories or distributing houses on the Canadian side of the international line. A large number of firms manufacturing and supplying various machinery, fitting and plants are also doing business in Canada in a similar way. This United States commercial invasion applies to a lengthy list of articles, including asbestos, barrels, blind rollers, button carpet sweepers, corsets, condensed milk, beds, corks, carriages, couch brass goods, billiard tables, cord registers, disinfectant, fly paper, fire extinguishers, fountain pens, gramophones, pickles, presses, pulley razors, rubbers, sealers, shoes, seal typewriters, watch cases, toilet etc. This gives an idea of the scale of United States industrial interests in the Dominion.

This great invasion of Canada by American capitalists and captains of industry is due in great measure to the stable fiscal policy which Canada has maintained for nearly a generation. There are some who will dispute this, but a canvass of the managers of the American enterprises that have located branch factories in Canada will convince the most unwilling free trader that the tariff is the main cause of the movement of American capital to Canada. There are other contributing causes, no doubt, but the policy Canada adopted this year ago, and which has been endorsed by the great majority of the people at intervals ever since is the determining factor, just as it was the most potent factor in the enormous industrial development of our neighbors to the south during the past two generations.

STRAYED—from ranch of Casper Bartsch, one dark bay gelding, foretop clipped, white spot on head, pig-eon-toed, branded **H** blotted \$10 reward for delivery to above or information as to whereabouts.

Horses branded **H** 2 left thigh, **Z** left front foot white, strip in face, weight about 800 lbs., age 3 years. Mike Brown, Brand Reader.

EMPLOYMENT AND WAGES

"Made-in-Canada" Provides Work For Working People

The "Made-in-Canada" movement means more than business or profit for the Canadian manufacturer. It means employment for Canadian workpeople, who will spend their wages over the counters of Canadian stores to the advantage of Canadian merchants and Canadian business generally. It means traffic, both freight and passenger, for our railways, which again contributes to increased activity in all fields of Canadian commercial enterprise. It means a home market with good prices for what the farmer has to sell to the Canadian workman and his family.

Ask the farmers around Winnipeg or Toronto, or Montreal or Brantford what they think about this splendid market right at their doors.

Dr. Samuel Johnson deems a patriotism as "the last refuge of a scoundrel." The man who gets his income from this country in a time of war and spends a good share of it in another is the last kind of a scoundrel that could be considered a patriot.

KEEP THE WHISTLES BLOWING AND THE OLD FLAG FLYING BY BUYING "MADE-IN-CANADA" GOODS

MISCELLANEOUS

(Continued)

I released her hand and she faced me calmly enough.

"You don't know how much safer I feel when I have you to depend upon," she said.

How my heart leaped at that assurance and I saw that she had indeed forgiven me.

"I shall leave everything to you, Master Hampton," she continued. "Do you tell me what to do, and I will do it."

"I know you will. I could not ask a braver, better second," I answered heartily.

At that moment I heard a step on the ladder. Somebody was coming. Quick as a flash I realized the part we had to play in public. I balled my fist and struck the bulkhead savagely. I suppose I must have changed my expression as well, for in her surprise she screamed faintly.

"That's it," I whispered, "scream again, louder, louder."

"What do you mean?" she asked in incomprehensible amazement, in this crisis my wits working quicker than hers.

"There is somebody outside. We have a part to play. I am abusing you and you are fighting, I whispered swiftly." Then louder, fairly shouting at her indeed, I cried, "Down on your knees, wench. You will find that you have met your master now."

I made some sound of scuffle and she did indeed scream loudly. In the midst of the commotion the door was tried, but fortunately I had turned the top of her voice.

"Help! Help!"

I turn called louder yet: "Silence, woman!" and struck the bulkhead again.

Finally turning to the door I opened it a bit, and there stood one of the younger seamen.

"What want you?" I began sternly and stormily. "I don't care to be disturbed just now."

"You are wanted on deck. It is just dawn. Land has been sighted, an' there's a heavy sea runnin'. Pinball an' Gibby want your counsel and advice what's to be done."

"Good," said I. "I will be with you in a moment. Tell them I have yet a word or two to say to this woman here."

The man turned on his heel, passed through the cabin and climbed the ladder to the deck.

"Now," I said quickly, thrusting one of my pistols into my little mistress' hand, "we can talk no longer this time. I am going to do my best for you, and if I fall here is a weapon. You know what to do with it."

"Shall I use it on them?"

"No, lass," I answered grimly, "on yourself if it comes to the worst."

"I understand," she said, paling a little.

"Lock the door when I go out, and on no account open to any voice but mine."

"I shall remember."

"And keep up the acting," I said. "Whisper and cover away whenever we are seen together."

"I shall not forget," she said, standing very straight, looking at me bravely, her eyes shining.

"And now goodby!"

I turned away, but she caught me by the shoulder. She extended her hand rather high. I was not too dumb not to understand what she wanted, and so I bent and kissed it, and it was no light kiss of gallantry, but I pressed my lips passionately against the little hand.

"Stay God keep you," she said as I turned away, breathing the "Amen" I dare not speak.

I heard the key turn in the lock before me, and with a heart full of misgivings in spite of my stern and resolute purpose, I came out on deck again.

CHAPTER IX.
In Which We Plan to Escape Together
From the Ship

I had no idea that it was morning already, the night had passed so quickly. The eastern sky was already gray, and although the day had fair to be an unpleasant one there was already light enough to distinguish land off to starboard. We had run quite near it in the night. It was still too gray to make out much more than the existence of the land itself, but I thought I saw beyond the nearest island others rising.

At any rate, there it was, where it ought to be, and I didn't make any doubt but that it was the island which we had been seeking these weary months at sea.

The whole crew was on deck. I didn't see any signs of Captain Matthews' body, although I looked hastily about for it. I learned later that they had tumbled him overboard without a prayer or word, after they had knocked him on the head. Pinball, Gibby and one or two others of the older seamen were on the quarterdeck, the rest being strung along the leviathan in the waist staring at the island. Two hands were at the wheel. The ship was pitching and laboring heavily and it required two hands to hold her up to it.

During the night they had taken a second reef in the tops'l. A whole gale was now blowing. Everything above the tops'l yards had been furled of course. The Rose of Devon was a wet ship in a seaway, and she was making heavy weather out of it.

I noticed one thing with satisfaction. They had evidently not thought it worth while to break open the arms chest, or to force the key from me, which they could easily have done, and none of them was armed.

"Well," I began, as I climbed over the hatch combing and turned aft. "I sent for you, Hampton," began Pinball insolently, and his failure to "master" me or to give me any title indicated our present relations, "because of that," and he pointed to the leeward toward the island.

"It looks like land," I said.

"How can I tell?" I answered. "I have never been in these seas before. Well, you took an observation yesterday, didn't you?"

"Certainly."

"And where were we?"

I named a latitude and longitude, not exactly what I had worked out, but near enough. I didn't want these ruffians to know exactly where we were. He pulled out the chart as I spoke and compared its figures with what I had given them. He could read figures if not letters.

"At any rate," he said, after studying over the map for a little time, that is not far from the point we are marking for, is it?"

"No," I admitted, "not very."

"Do you think that can be it?"

"I can't tell for certain," I replied.

"I should get another shot at the sun and see if you can?"

"I can't even get an observation unless we have clear weather," I answered.

"There'll be no clear weather today, I take it," said an old seaman standing with the other two.

"I don't much think it," I assented.

"Well, what do you advise then?"

Pinball, who had been listening intently, said:

"The advice was so self evidently good, in fact the only practicable advice, that there was no hesitation in accepting it. The boatswain stepped up to the horseblock, grabbed the trumpet and shouted his orders. Presently the ship was hove to with the island well under lee, distant, perhaps a league and a half, or maybe two leagues. Personally I should not have to a ship on a lee shore. I should have protested against it had I not suddenly developed a plan—a plan as desperately as ever came into man's head. But then the situation required desperate remedies. And for the accomplishment of the plan the ship was now in the very best position I could ready be kept in check.

4. Fewer fences are required.

5. Machinery can be more economically utilized.

6. More live stock can be kept thus increasing the quantity of available manure.

7. Profits and yields are increased.

8. The farmer is not dependent upon a single crop.

9. Permits of a more even distribution of the season's labor.

Following details of the rotations that are outlined is a summary of the characteristics common to all.

1. Grain fields are always seeded down with clover, even though it be used only as a fertilizer.

2. Grass and clover seedings are heavy. Increased crops of hay and rare failures of a catch have justified them.

3. Hired crops form a large proportion of every rotation. An attempt to farm a small area without a hired crop was not successful. Weeds could not readily be kept in check.

4. Barnyard manure is perfectly applied frequently in comparatively small quantities, rather than at long intervals in large quantities.

Expenditure required and derivable profits are fully explained along with the values of commercial fertilizers and the relative virtues of deep and shallow ploughing. Due regard to weather conditions and to the different varieties of soil make the bulletin of national importance and one worthy of close study and wide inquiry.

A Study in Soil Cultivation

Agricultural Bulletin Well Worthy of Close Study

An exceptionally valuable Bulletin is No. 83 "Field Husbandry: Summary of Results" issued by the division of field husbandry of the experimental farms and that can be had by application to the publications branch, department of agriculture, Ottawa. Reports are given of work carried on at the central branch farms and stations. The results of experiments in rotation of crops furnish information of great value. These experiments cover a period of eleven years and the results with advice founded thereon are set forth in the bulletin according to years. Following are a few of the benefits given and derived from adopting a judicious system of rotation:

1. The appearance of the farm is improved.

2. Every field receiving at regular intervals its fair share of manure and culture treatment, the entire farm is in condition to ensure a maximum yield.

3. Cost is lowered by the saving of time due to all the work of a kind being confined to one field.

4. Fewer fences are required.

5. Machinery can be more economically utilized.

6. More live stock can be kept thus increasing the quantity of available manure.

7. Profits and yields are increased.

8. The farmer is not dependent upon a single crop.

9. Permits of a more even distribution of the season's labor.

Following details of the rotations that are outlined is a summary of the characteristics common to all.

1. Grain fields are always seeded down with clover, even though it be used only as a fertilizer.

2. Grass and clover seedings are heavy. Increased crops of hay and rare failures of a catch have justified them.

3. Hired crops form a large proportion of every rotation. An attempt to farm a small area without a hired crop was not successful. Weeds could not readily be kept in check.

About Fossils

Nature's Way of Preserving Evidence of the Life That Existed in the Dim Past

Few people value fossils at their proper worth, because but very few know anything about them. Sometimes an irreverent youngster may be heard to designate some one of conservative tendencies as "a regular old fossil." Little knowing what he is talking about, or to how beautiful and strange a child of nature he is referring. Rightly viewed, a fossil is a historical document carved in tables of stone, of unimpeachable veracity, and almost incredible age. To him who has eyes to see a fossil will unfold a tale so interesting that few other histories can vie with it, and so old that it laughs at such mere human attempts as the pyramids, or the palaces of Babylon, as things of yesterday. It is as if nature brought herself how perishable all her work is; types vanish, species and genera disappear and are as if they never had been, yet shall something be saved for future generations to see what went before them. Thinking thus, nature looks around and makes a generous selection here a reptile eighty feet in length, there a creature that only the microscope can reveal to mortal eyes, now a huge tree trunk and then a filmy fern, a butterfly's wing, horny crab, an egg, a seed, or a delicate flower petal, nothing is too small or too great, if indeed nature is aware of such distinctions.

The speakers touched upon the political misunderstandings which existed between England and Russia in the past, chiefly after the Crimean war, and especially after the Berlin Congress, but only in order to say that Russia had completely forgotten them, and they proceeded to affirm how great an influence England had exercised over Russian minds by such poets as Milton, Byron, Shelley, Tennyson, Dante, Rossetti and William Morris; by such novelists as Dickens and Thackeray, by philosophers and publicists like Hume, Adam Smith, John Stuart Mill, Darwin, Huxley, Lyell and Spencer.

With the hearty concurrence of all present, a committee was formed composed of three branches, presided over by Maxim Kovalevsky, president of the Economic Branch, and under the direction of Professor Kononov; seconding a Literary Branch, presided over by the writer Ivan Bunin, whose excellent translations of English poetry into the Russian language have made him famous, and lastly, an Artistic Branch, which has not yet been fully organized.

It is pointed out that England can offer a vast market for Russian products, and, on the other hand, Russians are very desirous of seeing English capital coming into Russia, for the purpose of building factories, works, etc., to the mutual benefit of both countries.

She acts to work, lot to copy the model as a sculptor or a painter might do—no, she patiently removes the whole structure, grain by grain, atom by atom, here a little and there a little, and as each molecule is removed she replaces the perishable substance by something far more durable, using whatever she has at hand—linen, silk or clay to be afterwards baked and pressed in her laboratory for many thousands years. Every minute atom is replaced by another of its own exact form and size. This process is carried out faithfully throughout the entire structure, nothing is scamped, the most delicate filament is exactly reproduced, every curve or angle is as clear as in the original. When all is finished, there is, let us say, an elegant amonita or a dainty frond of seaweed, as exact a copy of the original as any photograph could produce, and saying plainly to those who have ears to hear: "Though you have found me at the top of a high mountain, yet these rocks that I now inhabit, were once at the bottom of a deep sea and though there is nothing existing today that is like me, yet until myriads of my brethren lived with me and peopled the seas."

The same voice cries aloud from the huge brontosaurus of the queen pterodactyl, as from the tiniest seed or most delicate feather. "We guard the past," it cries, "we tell the history of what has been, we are the witnesses of things long passed away but we can only speak to those who are able to hear."

Countless have been the cures worked by Holloway's Corn Cure. It has power of its own not to be found in other preparations.

Horse Talk

Sound Advice on the Care of Man's Best Friend

There is no time in the colt's life when he requires more generous feeding than during the first year after being weaned.

The colt should have plenty of bon and muscles-making food. A small ration of oats and wheat bran should be given daily on pasture.

The foundation of bone and muscle development must not be overlooked at this time. A colt that is neglected at this time will never develop into the horse that he might have made.

It is found necessary to give the young colt cow's milk, it should be diluted with half water, and sugar added.

Mare's milk contains less solids and more sugar than cow's milk.

All growing colts should be in pasture during the summer months. Exercise is most essential to the development of strong legs and muscles.

Give the work team the largest feeding at night.

The work teams should have a bran mash on Saturday night. The rest on Sunday will do much to keep them in the best of condition.

Regularity of work and regularity of feeding make long years of usefulness of the work horse.

Keep the farm teams well shod. Many farmers are careless in this matter and it is cruel.—Tim, in Farm Journal.

The Aid to Belgium

A western American paper, the Tacoma Tribune, said: "We needn't take so much pride in our generosity toward Belgium. Canada has given over \$2,000,000 for Belgian relief, far more than we have in proportion to our population, even while she has been subject to the tremendous burden of doing her bit in the war through heavy taxes and voluntary contributions of many sorts."

Canada has done well, but Australia has done far better. The Australian subscriptions to Belgian relief have totalled nearly four million dollars, as follows: New South Wales, £51,204; Victoria, £175,000; Queensland, £27,827; South Australia, £47,537; West Australia, £21,761; Tasmania, £8,500; total, £797,829.

We are not sure that the Tacoma Tribune is right, however, in thinking that Canada has done more in proportion than the United States. The American contribution has been very great.

One thing is certain. Not enough has been got from all sources to meet the need. Belgium is in a desperate way.—Ottawa Journal.

Censoring the Movies

Motion pictures are a new art, and a complicated system of censorship is growing up round them. There is no particular reason for censoring motion pictures more than anything else, except that they are new and their unsettled status gives the censorious instinct a chance to assert itself. Crime of all sorts is constantly described in print that is within the reach of any literate child possessed of a penny. It is constantly shown on the stage, the illusion of which is much more powerful than that of the motion picture.—Tilt-Bits.

Russia Looks to England

A Movement to Draw England and Russia Closer Together

A significant movement on the part of Russian society to draw England and Russia closer together has manifested itself in the creation of a league with the object of strengthening the relations between these two countries, says the London Daily Chronicle. This league, prompted by M. Novikov, a member of the Duma, was inaugurated in Moscow at the beginning of June, under the presidency of Mr. Ichelnokov, the mayor of Moscow. Among the speakers were Maxim Kovalevsky, the well known professor and member of the Council of State—"an old friend of England" as he called himself—M. Melnikov, the leader of the Constitutional party in the Duma; M. Rodtchev, the most prominent speaker of the same party, and many other leading representatives of the political, literary and commercial life of Russia.

The speakers touched upon the political misunderstandings which existed between England and Russia in the past, chiefly after the Crimean war, and especially after the Berlin Congress, but only in order to say that Russia had completely forgotten them, and they proceeded to affirm how great an influence England had exercised over Russian minds by such poets as Milton, Byron, Shelley, Tennyson, Dante, Rossetti and William Morris; by such novelists as Dickens and Thackeray, by philosophers and publicists like Hume, Adam Smith, John Stuart Mill, Darwin, Huxley, Lyell and Spencer.

A Very Bright Outlook.

Nothing is more pleasing than a statement from C. G. K. Nourse of the Canadian Bank of Commerce says the Calgary Herald, has been heard in the west for a long time. At a meeting of the Credit Men's Association Mr. Nourse stated that records show there had been a wonderful improvement in the financial reliability of the farmers of Alberta, the showing of irresponsibility now being cut down to many districts, less than thirty per cent.

In the past there has been a disposition on the part of the people generally to criticise the banks for their "show me" attitude when making loans to farmers throughout the west. The public assumption has been that all the would-be borrowers were honest. This view of the situation has been far from the truth and none know it better than the banks, which have had to learn by sad experience.

There is nothing novel in the situation, which is common in all new countries. Possibly most of the defaulting farmers would have been honest had nature been regularly kind to them, but nature was not and because she did not always give bumper crops and the tillers of the soil were forced to exercise a trained intelligence which they did not possess in order to carry themselves over the lean years, they failed and the banks suffered.

The change in conditions now announced by Mr. Nourse is indicative of the development of the country in a dozen different ways. Instead of recklessly mining the land, western farmers of standing today are applying all the intelligence they have to scientific tillage of the soil. They are no longer trusting to nature but are using their brains, with the result that successes are today more numerous than failures and a new agricultural era is opening up, in which a brighter day is appearing for the men on the land and a more prosperous time for the country in general is assured.

Who is the Robber?

Now that a good crop is assured in this district, the mail order houses are flooding the country with their catalogues. They are attractive and the prices on some of the goods are lower than they can be bought for here.

The cash-in-advance principle is still to the fore. That is why they can afford to sell cheaper than the man who has given out thousands of dollars worth of goods to oblige his customers all summer—yes, and perhaps all the preceding winter and spring.

You have been accommodated and there are two things you can do that will be nothing more than bare justice. Pay as much of your accounts as promptly as you can and spend as much of your ready money here as is possible.

The merchants have taken all the risks for several months, and some of them have done so only at the greatest risk to their wholesale connections. Now can you afford to show your appreciation, and it is the least you can do to patronize the men who are helping you.

How much money do the mail order houses spend in your district for schools, roads and other improvements? What would they care if you or your family went without food, clothing, tools or even fuel, if you had not the money with which to pay cash in advance?

Who is the robber—the firm that is obliged to charge you sometimes five per cent more for your goods, to save you money that would cost eight or ten per cent, or the firm that gives you nothing until you have first placed the money in its hands?

Our merchants have not asked us to speak of this. They do their best to give a square deal and ask no favors. The Standard thinks this is a mere matter of justice, and all who give the subject any consideration at all will agree,

Gleichen district should be well represented at the Alberta Provincial Seed Fair, Fat Stock Show and Poultry Show, to be held Oct. 14 to 17 at Calgary. Write Secretary E. L. Richardson for prize lists and full information.

Farms For Sale

Buy an Irrigated Farm From The CANADIAN PACIFIC RAILWAY

BECAUSE:

Irrigation makes the farmer independent of rainfall, and insures good crops, not occasionally, but every year.

Irrigation makes possible the successful culture of alfalfa, the king of fodders, which insures best returns in dairying and mixed farming.

Irrigation means intensive farming and close settlement, with all the advantages of a densely populated agricultural community.

Irrigation in the Canadian Pacific Railway Irrigation Block is no longer an experiment, since 1911 having absolutely demonstrated its success. Farmers in the Gleichen district can buy irrigated land from the Canadian Pacific

Railway at prices ranging from \$35 to \$75 per acre, with twenty years to pay and the privilege of a loan of \$2,000.00 for implements (6% interest); no principal payment at end of first or second year; no waiting required for title. Assistance is also given in supplying stock in approved instances.

This is the most liberal offer of irrigated farm land on record. Get full particulars from

The Home Town Sinks When You Send our Dollars Away

Business can speak of the early days, of the raw land that was broken, the passing of the years, and finally the gradual growth of the nearby town or village. Then, one day, a timber dealer comes along and starts a lumber order concern—a veritable store between covers, and sends his orders away and by the same way, and he comes along—neither—to club with him for a similar purpose. He forget—or did not think that the early days of struggle had been forgotten, and he does not know what the merchants were willing to help an honest and hard-working man do. This went on for a number of years. You see the dollars were always going away—never staying at home. The village merchants had to reduce their prices to compete, and the business were going down since so little money was in local circulation.

Postman Jones, who works in his store we need, yet he says that we ruin the community by sending money away. If he has not much stock how can he sell it away?

Let's add logic; that Jones could not stock the goods because he could not afford to. Finally, Jones, and by the time the village merchants, moved away to some other centre where things looked better. When some more goods came in, it was too hurry. It was very hard to get it local.

The Money Tastes Good.

Then, one day, like a ship going down to the bottom, the little town or village went down, bearing with it the school, church, local library and social hall.

A REAL WINNER

A Sign That Pulled Business For a Hardware Merchant

A few months ago a leading hardware dealer in a Canadian town found his sales were falling off rapidly. He did not know exactly what had set his mind to work to find out the trouble and how he could overcome it. He hit upon the following display card as a first step:

We Are Going to Make

"BUSINESS AS USUAL"

Selling Goods

MADE IN CANADA

"WE'LL HOLD ON WHAT WE HAVE—
AND MORE."

By Selling

MADE-IN-CANADA GOODS!"

In telling a customer about it afterwards, he said: "I have come to pretty long chances and made some pretty shrewd guesses in shaping up programmes for this store, and it's been making a sedentary life. I've lost out, but this time one is to be won. I am sure winner I've ever tried. I'm banking on it strongly, and I think we can do it. We are going to let our neighbors and the citizens of this country, by sticking to it. What's more, we are going to let the rest of the country do the same well all over. A lot of long-drawn-out accounts that have refused to be closed up be soon closed out to the fact that they really supports us in our busi-

ness.

Persistency in Advertising

One stroke of bell in a thick fog does not give any lasting impression of its location, but when followed by repeated strokes at regular intervals the densest fog or the darkest night cannot long conceal its whereabouts. Likewise a single insertion of an advertisement—as compared with regular and systematic advertising—is in its effect not unlike a sound which, heard but faintly once, is lost in space and soon forgot.

Gleichen Livery Barn

Having moved into town with my family I have now taken entire charge of the Gleichen Livery Barn where I will be most pleased to meet all who may want anything in this line of business.

We have first class vehicles and horses and will give you the best attention at all times. Am ever ready to buy, sell or trade horses and will always have a full supply to choose from on hand.

SCOTTING STALLION FOR SERVICE

The Prize Winning Stallion
BARON CHIMES W.G. will stand for the season 1915 at G. F. Taylor & Co.'s Barn, Gleichen.

He is registered under the rules of the American Trading Register, and was born in 1910, standing 15 hands, 10 inches, colt, black, 1,000 lbs. in weight, 210 lbs. in bone, 100 lbs. in fat and 300 lbs. in the 230 lb. lot he stands in. He is a famous sire for speed. First dam Henry Hanover, the dam of Baron Bonito who in 1902, sired the Dominion Champion. Second dam, Lady Pritchett 18 and others.

He is with deep regret that we must advise that our dear old daughter of Mr. and Mrs. Peter Kelly, which occurred on Sunday morning from pneumonia, the funeral service and burial taking place the same afternoon. It is particularly sad the little one had enjoyed excellent health up to the previous day, and was a very bright child.

The Musical Recitals, Swiss

bell ringing, musicians, vocalists and entertainers, have arranged with the Knights of Pythias to put on one of their popular shows in the Gleichen Opera House on Friday October 1st.

It is to be followed by a concert which the company will supply the music.

These artists were here about two years ago and were greatly appreciated.

It is with deep regret that we must advise that our dear old daughter of Mr. and Mrs. Peter Kelly, which occurred on Sunday morning from pneumonia, the funeral service and burial taking place the same afternoon. It is particularly sad the little one had enjoyed excellent health up to the previous day, and was a very bright child.

The Canadian Government Elevator at Calgary is now open for business. It has a storage capacity of one and a half million bushels and is equipped with a grain elevator, bins, and other test gear, in an manner desired by the farmer.

Full particular as to charges, etc., together with shipping bills for use in consigning grain to this house can be readily obtained upon application to the offices at 203

Grain Exchange, Calgary.

AN AMERICAN VIEW

OF BRITAIN'S POLICY

Opinion of Prominent New England Writer—Predicts Abandonment of Free Trade

Thomas O. Martin, Secretary of the Home Market Club of Boston has this to say in regard to the recent statement of our Foreign Minister:

"The Foreign Minister has given us a few days ago in which we predict a protective policy for great Britain after the war. Few of our residents will be surprised to hear that Mr. Martin, 'of the majority of a nation in the British fiscal system,' as a result of the war, 'will return to the tariff reform of 1881.' The tariff reform, accelerated by the developments of the last twelve months, will be a strong argument in favor of protection. The Teutonic allies could not have held a world at bay. It will be difficult to estimate how much we shall have to pay for protection, but it is safe to say that it will be as much as possible from the manufacturing industries and from agriculture."

"The British Tariff Commission has recently reported on the new industrial conditions which the war has brought vividly to public attention. Interviews with many business men indicate that the time has come when the British manufacturers and merchants should embark on new trade ventures or enlarge present ones unless some form of adequate protection is provided for them. The British Tariff Commission has recommended that the Government should give some safeguard against the renewal of dumping and dumping should be prohibited."

"Impetus to the protective drift comes, too, from financial quarters. Thomas O. Martin, David Lloyd-George, in his eloquent speech before the House of Commons, has expressed an increased output of needed munitions and supplies has employed many thousand additional men in the munition factories. In a recent speech he said: 'If the goods of our manufacturers are too high in price, that can be rectified, but the cost of living has increased so much that it is a serious evil as the sending of orders to neutral countries which by so doing increase the cost of living in this country.'

"The prevailing view among British manufacturers seems to be that the time when opportunity may be available for the advancement of British industry should have some safeguard against the renewal of dumping and dumping should be prohibited."
